### NEW PRODUCT!

#### "ARE YOU READY FOR THE TELEMATIC REVOLUTION? - TOPCON TIERRA REMOTE ASSET MANAGEMENT"

Tierra, Topcon's revolutionary web-based telematics service gives you the power to monitor every piece of equipment and links you to your jobsite information instantly, from anywhere. Tierra provides you with real time, critical data effortlessly, both from and to on-board equipment and all data is property of you, the contractor. Manage your fleet effectively, no matter where you are.

tierra™

#### The benefits of the Tierra solution:

- **Security** - Tierra allows you to set up 'geo-fences' or boundaries for your machinery, so that key personnel can be alerted instantly, via telephone or email if a machine leaves the electronically designated area.
- **Productivity** - Measure actual production time and idle time with daily reports. Issues can be addressed promptly, enabling immediate improvement.
- **Job Costing** - instead of gathering machine run time, Tierra provides this information daily, and accurate, dependable reports are available with just a few simple keystrokes.
- **Maintenance** - Set up your machines to alert managers once scheduled maintenance intervals have been reached.
- **Utilization** - In 30 seconds, know which machines are not being used, and are available to be moved to a more appropriate jobsite.

Contact Earl Dudley, Inc for more information.

#### CURRENT SOFTWARE VERSIONS

Pocket 3D	6.11p04 (FC100)
Pocket 3D	6.11.05 (FC120 and FC200)

#### 3DMC TRAINING SCHEDULE FOR 2009

In association with the Topcon University program, Earl Dudley, Inc will be providing pre-scheduled training classes throughout 2009 for your GPS and Machine Control needs. The single most important factor in successful use of our equipment after we deliver a system is well trained personnel. Get the most out of your investment and personnel by insuring they are well trained. Topics and dates will be posted soon at [www.earldudley.com](http://www.earldudley.com)

# FOOOORE!!

Don't blame your hook or slice on an uneven T-box at the Robert Trent Jones Hampton cove Golf course, because you won't find one! David Montgomery with Sunbelt Gold sees to that by using a Topcon Laser Controlled System on his box blade. His T-boxes are graded with a slight slope and are graded with laser precision. He sets his Topcon RL100-2S Rotating Laser at the proper degree of slope, then adjusts the laser receiver on the box blade, turns the system on automatic then blades away until the T-box is laser precision flat.

EARL DUDLEY, INC.
